

*Get a Lift with Leyman*

## **PRESS RELEASE**

### **THE MM<sup>2</sup> MAINTENANCE MINDER**

(JUST THE TICKET)

The MM<sup>2</sup> Maintenance Minder brings a full range of advanced functions designed to help fleets measure and record tail lift utilisation and tail lift performance, whilst at the same time protecting the tail lift from potentially damaging conditions or situations.

The MM<sup>2</sup> Maintenance Minder;

- **Stores basic lift information** such as the Lift Model, Lift Serial Number, Date of Manufacture and the Vehicle ID or Registration Number. *If the Lift Serial Number Plate is lost or unreadable, basic lift information is still available.*
- **Counts the number of lifts and gives a warning signal when lift Maintenance is due.** *There is an automatic audible reminder when the lift is due for maintenance.*
- **Provides Advanced Voltage Monitoring.** **When the voltage dips inside an established window, the unit waits for 3 seconds to see if the voltage recovers.** *This eliminates many false alarms for low voltage.*
- **Monitors Motor Temperature using an internally mounted switch.** *This provides improved accuracy over surface temperature monitoring.*
- **Limits Continuous Motor Run Time to 3 minutes.** *This prevents motor damage due to shorted or stuck switches.*
- **Provides an Audible Warning for Low Voltage, High Motor Temperature and for when lift Maintenance is due.** *The lift operator receives a precise warning of a problem condition.*
- **Provides an Anti-Doorbelling feature that prevents the motor from operating if the lift control switches are toggled rapidly.** *This prevents contacts in the starter solenoid welding together.*
- **Stores all Fault Information for both the current Maintenance Period and for the Lifetime of the tail lift. This information can be downloaded to a PC.** *Records can be kept internally at the controller, or as a hard copy.*
- **Has an Advanced Trouble-Shooting capability.** **The unit stores High and Low Voltage readings during the most recent lift, plus records time spent inside the voltage window.** *The unit captures low voltage information accurately and provides the ability to perform quick electrical system checks without meters.*

The MM<sup>2</sup> Maintenance Minder can also be interrogated to provide the following very useful information for the last Maintenance Period and for the Lifetime of the lift;

- The number of Lifts made
- The total number of Minutes that the motor has run
- The number of lifts made past the pre-set Maintenance period
- The number of Low Voltage faults
- The number of Maximum Run Time faults
- The number of High Temperature faults

The MM<sup>2</sup> Maintenance Minder comes as standard on the LHLP 4500/5500 series lifts and is available as an option on the rest of the Leyman Lift (UK) Tuckaway lift range.

Leyman Lift (UK) will be exhibiting at the upcoming Commercial Vehicle Show on 25-27 April at the NEC in Birmingham. Come and see us on Stand No 05-228 (BAR Cargolift Stand) where we will be pleased to demonstrate our equipment and answer your questions.

END

If you have any further questions, please do not hesitate to call me. My mobile number is 07813 843 099

Yours truly,

J W White
