

Available with the following premium models:

FDC Series Fold-A-Vador™

FBG Series Fold-A-Vador™

TLS Series Hide-A-Way™

LHLP Series Hide-A-Way™

STG Series Hide-A-Way™

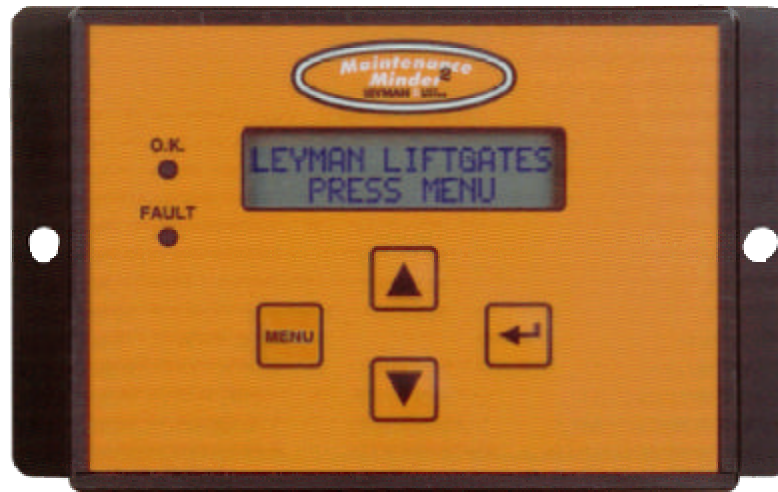

LEY Series Ley-Vador™

The New Maintenance Minder²™ Power Unit eliminates the need for hand-held readers by monitoring and recording critical operating data. In addition, the Maintenance Minder²™ Power Unit brings a full range of advanced functions designed to help fleets measure and record lift gate performance and operating data while protecting the gate from potentially damaging conditions.

MAINTENANCE MINDER²™

FEATURES & BENEFITS

- **Stores basic lift gate information such as Model, Serial Number, Mfg. Date, Vehicle ID.**
If plates or tags on lift gate are lost, basic gate information is still available.
- **Limits continuous motor run time to 3 minutes.**
Prevents motor damage due to shorted or stuck switches.
- **Counts number of lifts and gives warning signal when maintenance is due. Easy to reset after maintenance is performed.**
Automatic audible reminder for service intervals.
- **Audible warnings for low voltage, high temperature and maintenance due.**
Operator receives precise warning of problem condition.
- **Advanced voltage monitoring - when voltage dips inside an established window, controller waits 3 seconds to see if voltage recovers, before signaling a fault.**
Eliminates many false alarms for low voltage. Stores all lift gate usage information up to 999,999 lifts.
- **Anti-doorbelling feature - power unit will not operate if switches are toggled rapidly.**
Prevents contacts in solenoid from welding together.
- **Motor temperature monitored using internally mounted switch.**
Improved accuracy over surface temperature monitoring.
- **Stores all fault information for both the current maintenance period and lifetime. Information can be downloaded to a PC.**
Records can be kept internally at the controller, or as a hard copy.
- **Advanced trouble-shooting capability - stores high and low voltage readings during the most recent lift, plus records time spent inside the voltage window.**
Ability to perform quick electrical system checks without meters. Captures low voltage accurately.
