

Cincinnati, OH- Leyman Lift Gates is pleased to announce that they will be the official distributor of the TAG power system designed and manufactured by Green Road Energy Inc. Leyman Lift Gate, the inventor of the side lift gate, has like all lift gate companies, been looking for a way in which to provide the proper charge to the batteries, which power the lift gate motor and other auxiliary equipment. This has been the most difficult issue to solve for companies that use lift gates for deliveries.

With Green Road Energy's TAG system, keeping the batteries charged on delivery trailers is now possible, without connecting to the tractor's alternator, or running the refrigeration unit's diesel engine just to charge lift gate batteries. This saves both the fuel used to produce the needed energy, and reduces the CO2 and other emissions of the semi-truck. The TAG system is an axial based wind turbine generator that uses the air that the truck pushes through to convert it to a usable power source for battery charging. This is a green power source which has been in use since about 2000 B.C. The TAG system is not only a green/clean energy, but it also provides a true ROI for the end user. With fuel prices only seeming to be increasing the ROI becomes shorter, now in the range of 2.3 years.

The performance of the TAG system has been tested for hundreds of thousands of miles and has had zero maintenance or performance issues. It is capable of outputting up to 50+ amps at 12 volts and with no voltage drop. It has been proven both in heavy city traffic such as Atlanta and Dallas, and across country as well.

Dedication to quality through innovation, timely and professional service, and solutions for the challenges of material handling have enabled Leyman Lift Gates to set the standard in all-hydraulic lift gates for over 50 years. Founded in 1940 as Leyman Manufacturing Corporation, the company's state of the art engineering design, world class manufacturing processes, and outstanding response to their customers' needs continues to lead the industry into the 21st century. Through a distributor network of over 900 business partners across North American, Central America, and South America, Leyman offers 18 different lift gate models for aftermarket customers. Leyman is also a leading supplier to the original equipment manufacturers of trailer and truck bodies. And with the Additional offering of the TAG system, Leyman is not only able to set the standard for hydraulic lifts, but in charging the lift batteries as well.
